5.

25X1A

- 6. Camp Headquarters was located in a three-story eighteenth-century chateau on the premises of the installation. Officers of the rank of major commuted daily to the camp from Vac. All company-grade officers and enlisted personnel were housed in tents.
- 7. The reservists were armed with No. 48, Soviet-type long rifles. For target practice carbines, named "Levente," were issued.
- 8. Signal equipment available to the entire camp included forty R/7b radio sets. R/3, R/14, R/20 type radio sets were seen in the camp but no instruction was given in the use of them.

The signal equipment of the 2d Bn. consisted of:

Six R/7 radio sets, Four R/20 radio sets.

- 9. The training of the reservists consisted of political instruction, and infantry and signal corps training. The latter consisted of Morse-code practice, electro-technical and radio-technical training.
- 10. Morale, because of a variety of reasons, including very poor meals, the informant system, imexpert leadership, and the brutality of the non-commissioned and the commissioned officers, was at a very low ebb. From the 30th Company alone six men were court-martialed because of careless remarks.
